

# **PROJECT NAME: DATABASE DRIVEN WEBSITE WITH LOGIN AND JAVASCRIPT TOOL**

**(Concept similar to <http://twinery.org/2> but less complex and with a login functionality)**

## **Overview:**

**This Free Tool will be for helping indie writers to create pre-made interactive nonlinear stories. Any writer with no programming knowledge should be able to sign up and begin writing stories in a graphical interface, saving and editing these anytime they sign in. I am looking for an expert freelance in CSS, JQuerys AJAX and MySQL.**

## **Front end**

### **Functionalities:**

- **Register, Sign in and Recover a lost password.**
- **Write a new story, selecting images available only in the website.**
- **Save, Edit and Read an own story in a environment like twinery.org**
- **Receive and Reply messages from the administrator.**

## **Back end**

### **Functionalities:**

- **Upload/Update pics to the DB (writers will use them for the stories)**
- **Send and Reply messages from the writer.**
- **Update Minimum number of words per book (constraint).**

# PROJECT NAME: DATABASE DRIVEN WEBSITE WITH LOGIN AND JAVASCRIPT/AJAX TOOL

(Concept similar to <http://twinery.org/2> but less complex and with a login functionality)

- Extra Considerations:
- Care more about the code and structure. I will take care of the design.
  - Dummy images: GIFs. You will receive them from me if I select you for the project. 'Dummy Fixed Images' are images that do not change with every user, which means that all writers will see the same image. 'Dummy Variable Images' are images that are personalized for each user.
  - All images used in this website will be hosted in the website's database. No front end file upload functionality, just for the profile picture.

Deadline: Late June, in worst of the cases first week of July.

As a second part of this project, in the near future I will need to develop access to this tool by an App (Android and iOS). I will hire the developer of this first part.

The first part of the project ends when the website and the database is working in my desired domain.

# **PROJECT NAME: DATABASE DRIVEN WEBSITE WITH LOGIN AND JAVASCRIPT/AJAX TOOL**

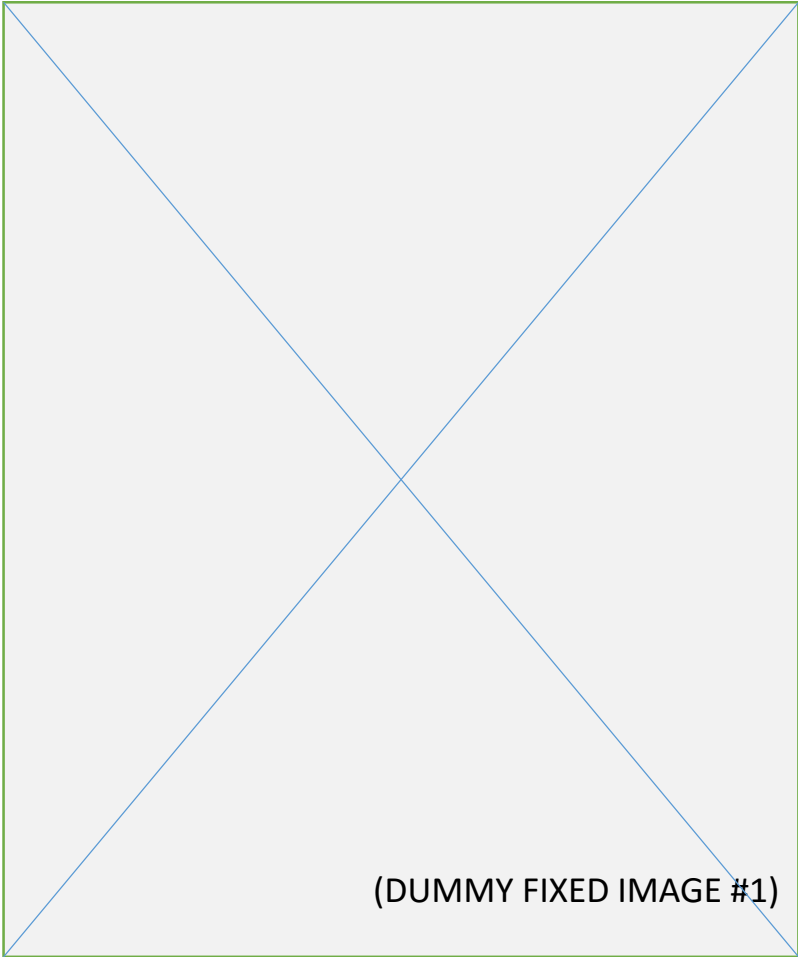

**(Concept similar to <http://twinery.org/2> but less complex and with a login functionality)**

- My choosing criteria:**
- **You must have a good under budget ratio. My budget is sort of tight, and I can't afford increasing it. Please, be responsible when you send your proposal.**
  - **After you send your proposal, I will look up for a similar project of yours in your Freelance.com profile, to confirm your AJAX and CSS development skills.**
  - **I speak native Spanish and fluent English. Mastery in any of these two languages is a plus.**

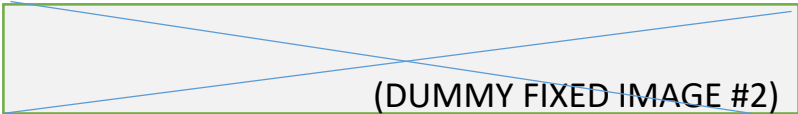

**As a second part of this project, in the near future I will need to develop access to this tool by an App (Android and iOS). I will hire the developer of this first part.**

**The first part of the project ends when the website and the database is working in my desired domain.**
